BUILD A LEARNING GAME

Build a short game that helps your group practice one real-work skill. Play it, change one rule, play it again.

⏱️ 19 MINUTES

0–2 min	Form a group of 3–5. Pick Option A or B.
2–7 min	Build your game
7–12 min	Play round 1
12–17 min	Change one rule, play round 2
17–19 min	Write one takeaway on a sticky note for the debrief

ROLES (trade them each round)

- **Driver:** holds the phone and reads the AI out loud
- **Players:** everyone else takes turns responding
- **Observer:** notices what works and keeps an eye on the clock

OPTION A: BUILD-A-SIM — AI plays a character, you practice with it

1. Fill in the blanks on your poster in **big capital letters** with a dark marker.
2. Take **one clear, straight-on photo** of the whole poster.
3. Open any AI chatbot (ChatGPT, Gemini, Claude, Copilot...), upload the photo, and type:

> 📸 **"Run the game on this poster. Start now."**

4. Take turns responding. Stuck? Say **"hint."**
5. After round 1, make the change you wrote in step 6 and play again.

If the AI misreads your handwriting, just type the correction.

OPTION B: ASK AI FOR A GAME — AI designs a game, you play it in the room

Turn this page over. ➜

Before you leave the game: write on a sticky note, "One thing from this game I could use with my team..." and bring it to the debrief.
